

Supplementary Figure 14 Positions of chimpanzee endogenous retroviruses (CERVs) on chimpanzee MSY. The backgound colors yellow and blue represent X-degenerate and ampliconic sequence, respectively. The chimpanzee MSY is shown schematically at top. Yellow color represents X-degenerate sequence. Multi-colored blocks indicate amplicons. The positions of the CERVs are shown below the MSY schematic. Heavy lines indicate full-length CERVs and lighter lines indicate solo LTR (long-terminal repeat) CERV copies. GenBank accession numbers for CERVs type 1 and 2 are AY692036 and AY692037.
